## OBJECTIVE

Aspiring Software Development Engineer with a strong foundation in data structures, algorithms, and full-stack web development. Seeking a challenging role to contribute to enhanced user experiences while growing my skills in emerging technologies and design practices.

## EDUCATION

- |                                                                                                      |             |
|------------------------------------------------------------------------------------------------------|-------------|
| <b>B.Tech CSE, Jaypee University of Engineering and Technology (M.P)</b>                             | 2022 – 2026 |
| ◦ GPA: 7.8/10.0                                                                                      |             |
| <b>Class 12th (CBSE) and Class 10th (CBSE), Sri Satya Sai Vidya Vihar, GAIL Vijaipur, Guna (M.P)</b> | 2020 – 2022 |
| ◦ Class 12th Percentage: 91.4/100.0, Class 10th Percentage: 87.6/100.0                               |             |

## SKILLS AND TECHNOLOGIES

**Languages:** C, C++, Python, JavaScript, HTML.

**Web Development:** React.js, Node.js, Tailwind CSS, CSS, MongoDB.

**Tools and Technologies:** GIT, GitHub, Postman.

## EXPERIENCE

- |                                                                                                                |                |
|----------------------------------------------------------------------------------------------------------------|----------------|
| <b>Web Developer Intern</b>                                                                                    | Vijaipur (M.P) |
| <i>GAIL (India) Ltd</i>                                                                                        | June 2024      |
| ◦ Designed and developed a prototype website for GAIL India using HTML, CSS, React to demonstrate improved UI. |                |
| ◦ Focused on responsive design, ensuring compatibility across devices.                                         |                |

## PROJECTS

- |                                                                                                                                                                                                                                                    |                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>SMS Spam Detection Website</b>                                                                                                                                                                                                                  | <a href="#">Link</a> |
| ◦ Developed an SMS Spam Detection system using Machine Learning to classify messages as spam or legitimate. Built and trained the model in Python using libraries like Scikit-learn and deployed the system through a user-friendly web interface. |                      |
| ◦ Built a responsive front-end on PyCharm, resulting in a <b>20%</b> improvement in user engagement through enhanced user experience.                                                                                                              |                      |
| ◦ It detects spam and ham messages with an efficiency of <b>98.6%</b> .                                                                                                                                                                            |                      |
| <b>Food Ordering Website</b>                                                                                                                                                                                                                       | <a href="#">Link</a> |
| ◦ Created a dynamic and user-friendly food ordering platform using React. A website for customers to browse menus, place orders, and make payments, with real-time order management and menu updates for admins.                                   |                      |
| ◦ Implemented user authentication and authorization, Interactive UI, Backend API.                                                                                                                                                                  |                      |
| ◦ Database Management: Utilized MongoDB to store user data, orders, and menu information, ensuring efficient querying and data retrieval.                                                                                                          |                      |

## HONORS AND AWARDS

Achieved the distinction of being the **school topper in the Senior Secondary Examination (CBSE)**.

Recognized as one of the eminent **Medhavi scholars** of Madhya Pradesh and awarded a prestigious 1.5 lakh annual scholarship for undergraduate studies.
